

IN THE SPECIFICATION

Please amend the paragraph beginning at page 11, line 18, as follows:

The unit 38 also has means for sending to the server station 10, via the network 1, the configuration profile containing the modified configuration.

Please amend the paragraph beginning at page 13, line 24, as follows:

In order to determine the applicable configuration profile, the configuration manager 42 uses the configuration table 44 and the user table [[45]] 46, these two tables thus forming a database associated with the configuration manager 42. The tables 44 and [[45]] 46 make it possible to associate with each other data representing the identity of a printer, the configuration data representing applicable configuration profiles, and user data representing user characteristics.

Please amend the paragraph beginning at page 14, line 1, as follows:

Tables 44 and [[45]] 46 are updated regularly, for example according to the subscription of new users to the print service, or according to the installation of new document processing peripherals.

Please amend the paragraph beginning at page 14, line 10, as follows:

The user table 46 depicted in **Figure 7** has two registers. A first "User" register 700 contains user identifiers. A second "Level of service" register 702 contains identifiers for levels of service subscribed to by the users corresponding to the user

identifiers stored in the first register. Thus, as shown in Figure 7, the levels of service "1", "2", "3" correspond respectively to the users identified by the character strings "Fred", "John", "Bob".

Please amend the paragraph beginning at page 17, line 1, as follows:

The object "config2" defines another configuration profile of a printer, for example the configuration profile associated with the identifier ~~"P1.2"~~ "P1.3" in the table 44 illustrated in Figure 8.
